

Ubuntu

Ubuntu

Ubuntu is a *Linux* distribution based on Debian and composed mostly of free and open-source software. **Ubuntu** is officially released in multiple editions: **Desktop, Server, and Core** for Internet of things devices and robots. The operating system is developed by the British company Canonical, and a community of other developers, under a meritocratic governance model. As of October 2023, the most-recent release is 23.10 ("*Mantic Minotaur*"), and the current long-term support release is 22.04 ("*Jammy Jellyfish*").

As with other [Linux distributions](#), all of the editions can run on a computer alone, or in a [virtual machine](#). An upgrade to **Ubuntu** is released every six months, with long-term support (LTS) releases every two years. Canonical provides security updates and support for each [Ubuntu](#) release, starting from the release date until the release reaches its designated end-of-life (EOL) date.
